Part III DETAILED ACTION

1. Claims 1-25 are pending.

2. Applicant's election of Group I, claims 1-10 in Paper No. 4 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Accordingly, claims 11-25 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to non-elected inventions.

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 1-10 are drawn to detecting a chronic immune disease by detecting RNase L fragments, wherein said fragments lack RNase L activity and correlating the detection of said fragments with a chronic immune disease. However, the only fragment the specification discloses which performs said function of detection is fragment 2, which has RNase L activity. In fact Applicant tested fragment 1 and 3 for detection of CFS and the results were inconclusive. Considering the state of the art, the Merck Manual of Diagnosis and Therapy does not recognize the detection of RNase L fragments which lack activity as being diagnostic of CFS or any other chronic immune disease and Applicant's specification provides evidence said fragments are not clearly diagnostic of CFS, it would be unpredictable and require an undue amount of experimentation to practice Applicant's claimed invention.

5. Claim(s) 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In base claims 1 and 6, the recitation of obtain assay results, does not clearly recite that the presence of said RNase L

fragments which lack Rnase L activity indicates the presence of CFS. Clarification or correction is required.
